

Plan W7213DS: See Through Design

House plans are Copyright © 2009 by our architects and designers.

- With unobstructed views from the front door through the back and from the family room to the kitchen and breakfast room, this is a clever open design.
- The dining room is set off from the open spaces by columns and beamed archways creating a warm atmosphere for guests.
- Eat informally in the breakfast room, or go outside to the expansive covered porch with fireplace.
- The vaulted living room can easily be converted to be a home office or study.
- The master suite has living room access. His and her walk-in closets are a nice touch.
- Two more bedrooms have their own baths. A built-in desk in the common area helps free up space in these rooms.
- Stairs to the basement are tucked behind the kitchen which has a handy pantry, an island and counter seating.
